## Connect to Azure AD

Dave Topan - 2018-11-02 - 0 Comments - in email

These steps are required once on your computer, not every time you connect. However, you'll likely need to install newer versions of the software periodically.

1. Open an elevated Windows PowerShell command prompt (run Windows PowerShell as an administrator).
2. In the **Administrator: Windows PowerShell** command window, run this command:

Copy

```
Install-Module -Name AzureAD
```

If prompted about installing a module from an untrusted repository, type **Y** and press ENTER.

- Open an elevated Windows PowerShell command prompt (run Windows PowerShell as an administrator).
- Run the **Install-Module MSOnline** command.
- If prompted to install the NuGet provider, type **Y** and press ENTER.
- If prompted to install the module from PSGallery, type **Y** and press ENTER.
